

Digital Visual Effects Diploma

Unleash your imagination

Images courtesy of Faction Creative and Haunting Hour Productions

Have you ever wondered how movie studios blow up buildings, explode planets, control forces of nature and make the impossible seem so real?

Learn how to translate your wildest imagination into stunning imagery with Capilano University's Digital Visual Effects diploma program. Over the course of the two-year program, you'll become proficient in 3D modeling, texturing, compositing, matchmoving and green-screen removal—essentially everything you need to know to create amazing computer-generated effects merged with live action footage. Plus, you'll become skilled in advanced software such as Maya, Houdini, Nuke and Photoshop, while learning how to excel in a production team.

Visual effects are used in almost every major motion picture made today. From *X-Men* and *2012* to *Red Riding Hood* and *A-Team*, many

of these films are produced in Vancouver because of its lower production costs and high concentration of major visual effects studios—making Vancouver the perfect place to launch your career. Cap grads will find positions as visual effects artists crafting effects for movies, television, advertising and the Internet.

Open to high school graduates, graduates of related programs and those with industry background, this intensive program will prepare you for the creative challenges of the visual effects industry. If you can dream it, we can help you build it and... (virtually) blow it up!

The program starts in September 2011. Apply now!
